

# MANUFACTURING OF PLASTIC BAGS

EEN BUSINESS REQUEST

COUNTRY OF ORIGIN

**DENMARK**

WHAT THEY SELL

A plastic bag able to hold 4 litres of water, with a spout sealed in the top and a clip-mounted handle. The plastic film must be UV transparent in the full UV-A and UV-B spectrum (285-400 nm), and must be able to be printed on both sides. Long term weather resistance is absolutely crucial. At present, the company uses mono-layer linear low density polyethylene (LLDPE) or low density polyethylene (LDPE) but is open to other suggestions. The sealing must be of high quality, and able to withstand drop tests of at least 1,20m. A 33mm spout is sealed in the bag. Other solutions with the same performance can also be considered.

LOOKING FOR

**A MANUFACTURING AGREEMENT WITH A PARTNER FROM NIGERIA**

The ideal partner would have the ability to produce a variety of plastic foils in different materials, as well as in-house services for sealing the foils into the right shape, adding the spout and handle. The company is however, open to two companies providing the services jointly, if this makes sense from a commercial viewpoint. The company is therefore provisionally looking for a manufacturer of LLDPE and LDPE foils, with accessories in HDPE or LDPE, in-house design, prototyping and sealing services. The partner must have sufficient volume to be able to produce 500.000 units in 2020.
